-!- FUNCTION: NECESSARY FOR BFFICIENT EXPORT OF EXTRA-CYTOPLASMIC PROVETION: BINDS TO THE SIGNAL SEQUENCE WHEN IT EMERGES FROM THE RIBOSOMES (BY SIMILARITY).

-!- SUBUNIT: SIGNAL RECGNITION PARTICLE CONSISTS OF A 4.5 RNA MOLECULE AND PROTEIN FFH (BY SUMILARITY).

-!- DOMAIN: THE PROPEIN HAS A TWO DOMAIN STRUCTURE: THE G-DOMAIN BINDS GTP; THE M-DOMAIN BINDS THE RNA AND ALSO BINDS THE SIGNAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     -!- SIMILARITY: BELONGS TO THE SRP FAMILY OF GTP-BINDING PROFEINS.

Altenbach and K. Cronin at USDA-ARS, Albany, CA. A CDNA
library was made using poly (A) RNA, and the CDNA clones
were in vivo excised to give pluescript SK1, phagemids
in the TJ Close lab (Chin, Close, Fenton) at the
University of California, Riverside. Placamid DNA
preparations and DNA sequencing were performed in the DDA
Anderson lab (Chins, Electron Parkerson in the PDDA
